About the session

> **We have upgraded the technology of teaching, but have we upgraded the technology of learning?**

Today's classroom may have high-resolution projectors, interactive panels, 3D anatomy models, digital dissection tables, animations, simulations and AI-assisted presentations. Yet the student sitting in front of all this technology may still be mentally elsewhere.

There is an important distinction between delivering information and facilitating learning.

A visually spectacular PowerPoint is not necessarily a good teaching session. A student who has watched a beautiful animation of the brachial plexus may still be unable to explain why an injury to the upper trunk produces a particular clinical deformity.

About the speaker

Dr Balasubramaniyam V

Professor, Department of Anatomy
CDSIMER, Kanakapura Road, Bangalore

Dr Balasubramaniyam V is a visionary anatomist whose career spans nearly four decades of transformative impact in medical education. As a professor, mentor and digital innovator, he has redefined how anatomy is taught and experienced, bridging classical knowledge with cutting-edge technology. His legacy includes curriculum development, mentorship and award-winning digital content creation.
